POSiTouch® Xml Interface
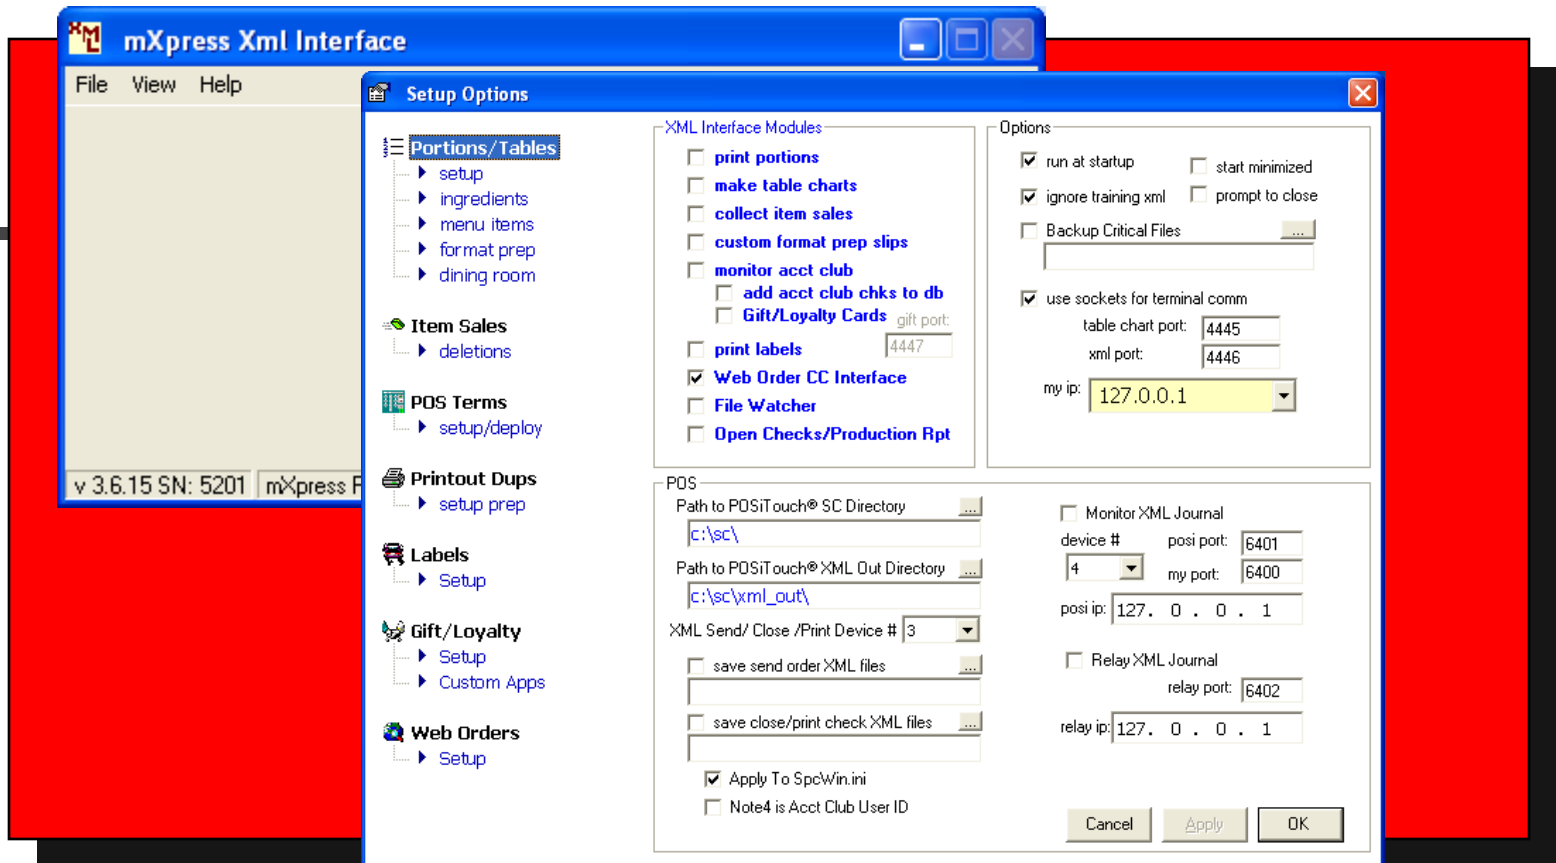

by: *Midnite eXpress*

What it does

- The XML Interface reads xml files created by POSiTouch®. and may perform a multitude of functions based on these xml files

Current Functions

- Portions
- Table Maps for Japanese Steakhouses
- Prep slip 're-formatter'
- Label/Invoice Printing
- Misc. Loyalty Functions
- Web Ordering Interface to <u>SlipStream</u>
- Production Reporting

Portions

Portions are generated through storage of ingredients in a separate database. After reading an xml send-order portions are generated against this database and a prep slip is pulled back in by POSiTouch®.

From POS

```
Time: 10:43
Table:      5 CK# 0002
FIRST L                ip_1

Generated Portions

```
Table: 5
 time: 10:43:14
 server: FIRST LAST

7 Dinner Setup

1 pc Filet

12 oz Shrimp

20 oz Scallops

3 pc Chicken

1 pc Salmon

8 oz App Shrimp

1 x-Vegetables
```

Table Maps

- Through a user program button servers may send table maps to a Windows Printer from any terminal (including thin client).

- These orders are also based on the xml send order

Portions: Design Dining Room

- Drag and Drop tables where you want them. This is also a good training tool for wait staff.

Prep Slip 'Re-Formatter'

- Using XML send order a prep printout may be re-formatted and printed at a <u>POSiTouch</u>® printer.

Label Printing

- Using XML Out Files from the POS, labels may be printed to a Windows Printer. Fields, Font, Label Size, etc. are customizable.
A background may also be used. The labels may be triggered by send order, print check, or close check.

Web Ordering

- XML Interface will perform CC authorizations through SlipStream before importing the orders into the POS. It can also monitor out of stock items to alert the web site if orders are unavailable.

Production Reports

- These can be produced based on POSiTouch openchks.xml file. These reports are particularly useful for preparing future orders, for example in a bakery.

Prod Reports – contd.
